DETAILED ACTION

Response to Amendment

In view of Applicant's Amendment received 12 December 2005, amendments to the claims have been entered. Claims 11-15 are canceled. Claims 1-10, and 16-20 are pending.

Claim 1, is generic and allowable. Accordingly, the provisional election as to the encompassed species is hereby withdrawn and claims 3 and 6-9, directed to the species of Groups 2-5, Figs. 10-20, are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 3 and 6-9, line 1, "(withdrawn)" has been changed to --(original)--.

Allowable Subject Matter

Claims 1-10 and 16-20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

With respect to claims 1-10 and 16-20, the prior art of record does not show or suggest a deck board fastening device that has a planar top plate having first and second planar portions (claim 1, line 3; and claim 16, line 7), at least one bottom tab extending downwardly from a bottom surface of the top plate (claim 1, lines 8-9; and claim 16, lines 13-14), and having first

and second resilient compression elements extending outwardly from opposite ends of the top plate, each of the compression elements having opposed sides compressible together (claim 1, lines 10-12; and claim 16, lines 15-17). The closest prior art, '415 Eberle, only possesses a fastening device with two downwardly tab members without having first and second resilient compression elements extending outwardly from opposite ends of the top plates. There is no teaching or suggestion, absent applicant's own disclosure, to provide the fastening device with first and second resilient compression elements extending outwardly from opposite end of the top plate.
